Android 10 update list huawei

(Pocket-tifik) - Huawei's latest software update is called EMUI 10 and has been gradually spreading to customers over the past few months - sub-check this article for the full list of compatible devices. EMUI is a Huawei-designed user interface that tops Google's Android. In this case, EMUI 10 works on Android 10. The Huawei-Google relationship Huawei has been a major problem since 2019 due to the US trade ban. Because Huawei has existing licenses/agreements for pre-existing devices, everything released before the Huawei Mate 30 series will be full Android with Google Play Services and everything it requires: Play Store, Play Movies, Play Games and all other Google apps that require Google Play Services for business. On devices released after May 2019 (such as the Mate 30 and P40 series), you don't have a full Google Play experience. This means that you rely on Huawei App Gallery to get your apps and games, and you miss out on some basic Android default apps. This will apply to any new Huawei or Honor device going forward until the situation between the US, China and Huawei is resolved and the trade ban is lifted. This version is the biggest visual revision for EMUI for several years. However, it is still very clearly Android's. In fact, it seems to be more pure Android than ever before. Despite this, there is no way to confuse it with the vanilla Android experience that you can find on pixel or Android One phone. He maintains his own style. There is no same Android skin, but the most similar from recent memory is the OneUI skin that Samsung uses on the latest smartphones. It also has full, system-wide dark mode. EMUI 10.1 has also now been released as an extra update, featuring some extra enhancements. EMUI 10 is visually designed from scratch to be influenced by the principles of magazine design. What this means is that headlines, lists and content seem to be a clear hierarchy. In reality, this means much more free space. Pocket-tifikLike Magazines, titles are big and bold, taking up a good section at the top of the screen. Be in the Settings app, Calendar, Contacts, or any other pre-installed Huawei app, this is true. All neat and all nice tie clean, with a well spaced look. It feels less cramped than it was before. The same approach applies to the drop-down menu, which is loaded on top of any screen you're on. The quick settings tiles were completely redesigned and turned into a more stock-like flat circle icon, similar to what you might find in the pixel. However, again inspired by the Magazine theme, drag quick settings all the way down, taking action as this title in the upper half of time and date, with sub-taggles and controls, within easy reach of a thumb. Minimalist approach, The Settings menu, where Huawei significantly reduces the number of main setting options. Similarly, if you open a contact card, you will now receive a thin pastel-colored card at the top. Huawei was inspired by Italian artist Giorgio Morandi, known for his use of rather muted colors in still life paintings. We can definitely see this resemblance. If you have taken a lot of photos using pocket-tific Huawei flagship Leica engineering cameras, you must undoubtedly come across the skeuomorphic look of the camera app, complete with fake leather textured panel at the bottom. Now gone, it is replaced by a much cleaner black and white minimalist ul. In 2019, so naturally any new software has to come with the option to switch on a dark theme system-wide. Like the new magazine-style pacing UX design, it penetrates all pre-installed Huawei applications after it is activated. Any background is all black, actually turning off all these individual pixels to save battery, while headings and titles go into a light shade of gray to be contrasting and clearly readable, but without going too bright and uncomfortable to look at. The aforementioned Morandi-inspired pastel colors have a much darker shade. So instead of greens, pinks and oranges, you hand-absorb dark shades of gray and brown with colors such as blue, orange and green. Pocket-tifikSerin has real benefits other than looking Dark Mode, as it helps your eyes relax and reduce time by looking at white screens with blue light too bright. As mentioned earlier, it also helps to save the phone battery. So it's a win-win. Another element huawei was keen to point out was the new fluidity and natural movement of its animations. It focuses more when you dismiss an app, pull it up from the bottom of the screen and return to the home screen. As you zoom out the app, it removes the trajectory and speed at which you moved the app and moves in that direction, returning to everywhere on the app icon's screen. As a result, it definitely feels and looks fluid and smooth. It helps you add a sense of harmony, eliminating any slight suddenness you may have felt before. Another much thinner animation tap something on the screen, or launch an app. When you tap the app to start an app, look at an icon and you'll notice a very light arc animation, almost like pressing a real button. As Pocket-lintf was almost pushed down, before releasing it and launched the application. The same happens if you select a photo in the Gallery app. It's just very subtle, but once you realize that there's something extremely nice about it. The changes are moving away from a visual point of view and moving to AI: Huawei is building structures not only to snappier the overall user interface, but also to make it work well with the entire product ecosystem. Huawei moves as a kind of smartphone he wants to hub that connects seamlessly to other devices. The carried out of this begins in the future, but works with Huawei's Matebook laptops. Also Apple has continuity features very similar for seamless integration between macOS, iOS and other devices. By connecting a Huawei phone to Matebook, you can get a virtual smartphone screen on the laptop screen, so you can copy and paste text easily and quickly using your keyboard and mouse. You can even use the same keyboard to drag and

drop files between phone and laptop by communicating with friends, colleagues and family. Pocket-tifik built on top of EMUI10 May mean that in the future application developers can develop an application for EMUI, and they can instantly adjust and optimize the appearance and layout of this application, no matter what screen it is on: whether it is an in-car entertainment system, a TV or a smartwatch. We first knew ABOUT EMUI when Huawei announced the beta version in September 2019. But why was this full launch announced? However, these phones and tablets are now able to get updates and you will get emui 10.1, too. Huawei announced that the following phones will be released in the coming months: Huawei P30 Pro Huawei P30 Huawei Mate 20 Pro Huawei Mate 20 Huawei Mate 20 X (4G and 5G versions) Porsche Design Huawei Mate 20 RS Huawei Nova 5T Huawei Mate Xs Huawei P40 lite, Huawei nova 7i, Huawei Mate 30, Huawei Mate 30 Pro Huawei Mate 30 Pro 5G Huawei MatePad Pro Huawei MediaPad M6 10.8-inch These devices will receive EMUI in the following months - including a timeline that it can do with a little more certainty in 2017 and 2018 taking into account many phones, especially the very successful P20 Pro Porsche Design Huawe Mate 20 RS Mate Huawei 20 X(5G) Huawei P30 lite Huawei Nova 4e Huawei P20 Huawei Mate 10 Huawei Mate 10 Pro Porsche Design Huawei Mate 10 Huawei Mate 20 lite Huawei P Smart 2019 Huawei P Smart + 2019 Huawei P Smart Pro Huawei P Smart Z Huawei Nova 4 Huawei Nova Lite 3 When is it coming to my Android 10 phone? Written by Cam Bunton and Dan Grabham. Mods stick to this post please.
